MGP SITE RESTORATION ▼

The environmental legacy associated with the operation of former MGP facilities has resulted in most sites becoming a non-performing asset and an environmental liability for their current owners.

The Eagle-SWS team capabilities span a full range of remediation services for MGP sites, including:

- ◆ Cleaning and disposal of MGP residuals in above ground and below ground holders of all types as well as in separators, tar wells, and soils
- ◆ Physical decommissioning and demolition of standing gas holders and gas plants
- ◆ Excavation of impacted subsurface soils in the open and under temporary structures
- ◆ Temporary dewatering and onsite water treatment in areas adjacent to water bodies and with high water tables
- ◆ Insitu and exsitu stabilization of saturated soils
- ◆ Odor management
- ◆ Installation of permanent groundwater and soil treatment systems
- ◆ Removal of MGP impacted sediments in and along water bodies
- ◆ Construction of cut-off walls and caps
- ◆ Final site restoration

We are committed to providing our clients superior service in this market by focusing on those services needed to assist them and in understanding their business goals and remediation objectives.

Our goal is to consistently provide our clients with the highest level of technical competence, strong project management, integrated health & safety, and quality control with an emphasis on financial accountability for all projects.
